

Module 1: Getting Started with iFeed V2 (15 min)

Learning Objective: Understand what iFeed V2 is, why it exists, and gain access to the platform using Google authentication.

Lesson 1 – What is iFeed V2? (3 min)

Overview

Learn what iFeed V2 is, how it helps formulate cost-effective carabao feeds using the Simplex Algorithm, and the different types of users who can benefit from the system (farmers and nutritionists).

Description

iFeed version 2 is a web-based feed formulation cost optimization system designed to assist carabao farmers in creating optimal feed formulations through ingredient and nutrient management. It utilizes the Simplex Algorithm to generate formulations based on nutritional requirements derived from user specifications. User specifications are made easier through a “google form like” survey to identify the proper feed nutrients the carabao needs. The system is purely focused on carabao feed formulations and formulation maintenance.

Lesson 2 – Creating and Managing Your Account (5 min)

Overview

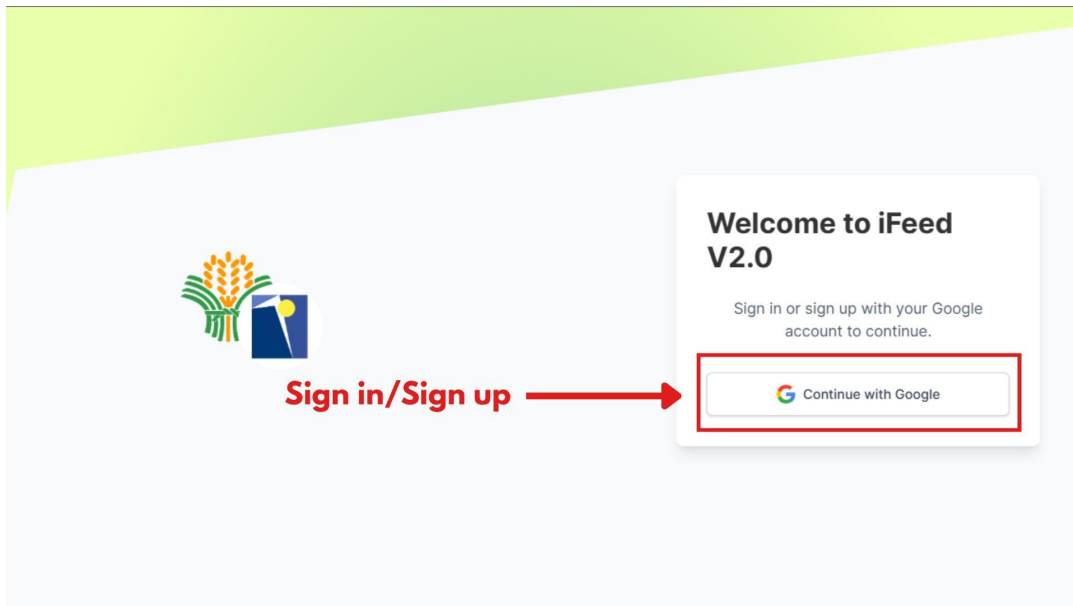

Learn how to create an account, sign in using Google authentication, and securely sign out.

Step 1. Sign Up

Allow new users to create an account through Google, ensuring a secure, passwordless account.

Step 2. Sign In

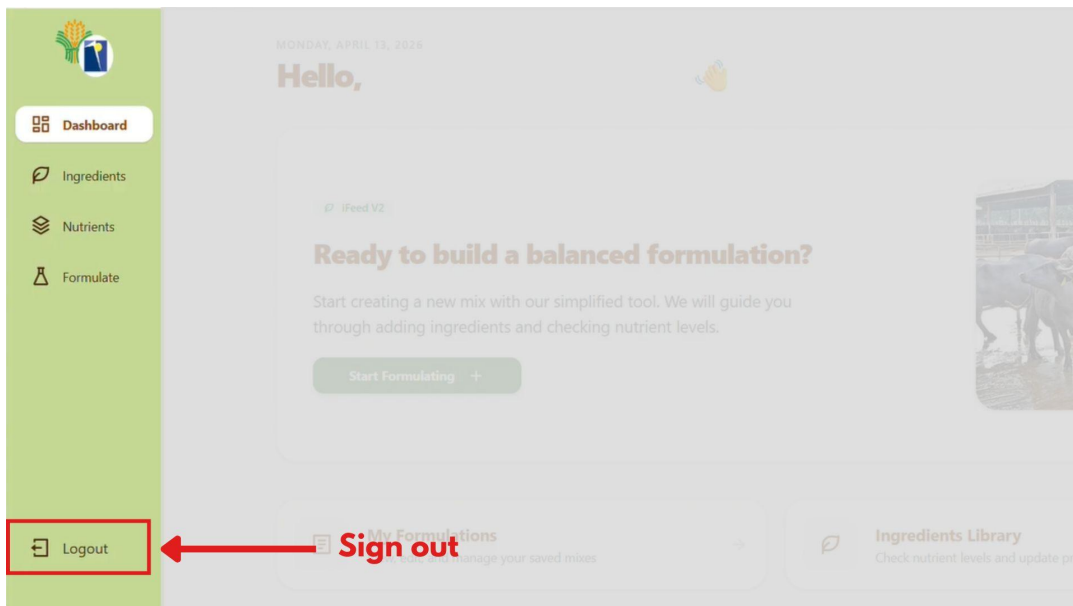

Enable existing users to log in through Google Sign-In for a secure and quick login experience.

Sign in / sign up with a Google account

Step 3. Sign Out

Allow users to securely log out, terminating active sessions to protect their information.

Sign out from the dashboard

Test Cases

Test Case	Expected Result
Sign up using a valid Google account	User account is created and redirected to dashboard
Sign in using an existing Google account	User successfully logs in
Sign out from dashboard	User session ends and is redirected to login page

Test Case	Expected Result
Attempt to access dashboard after signing out	User is prompted to log in again

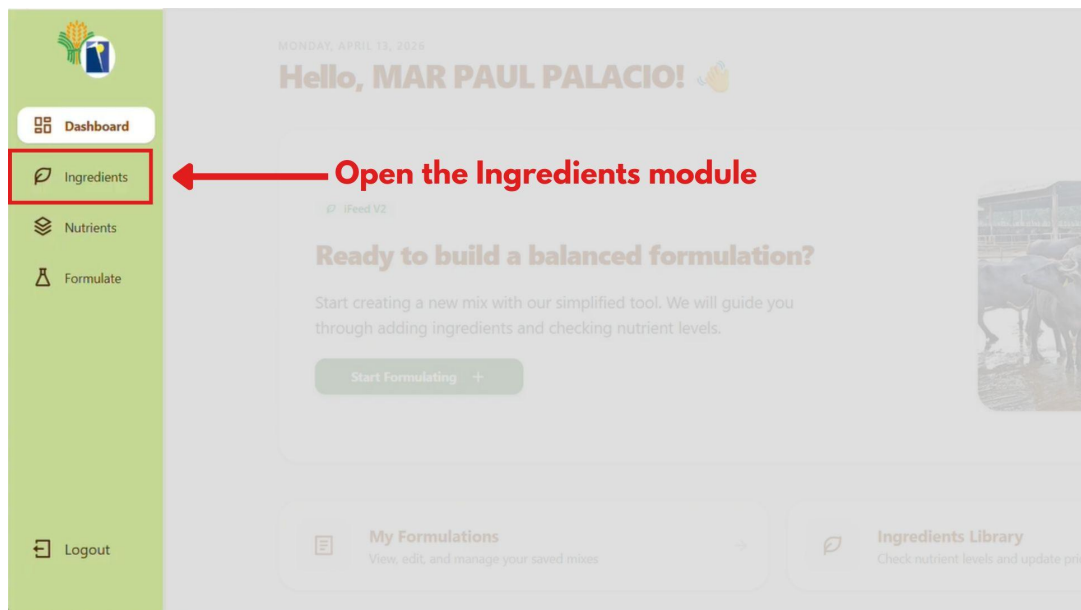

Lesson 3 – Reading the Dashboard (7 min)

Overview

Understand the main sections of the dashboard including Start Formulating, My Formulations, and the Ingredients Library.

Step 1. Navigate through Ingredients Library

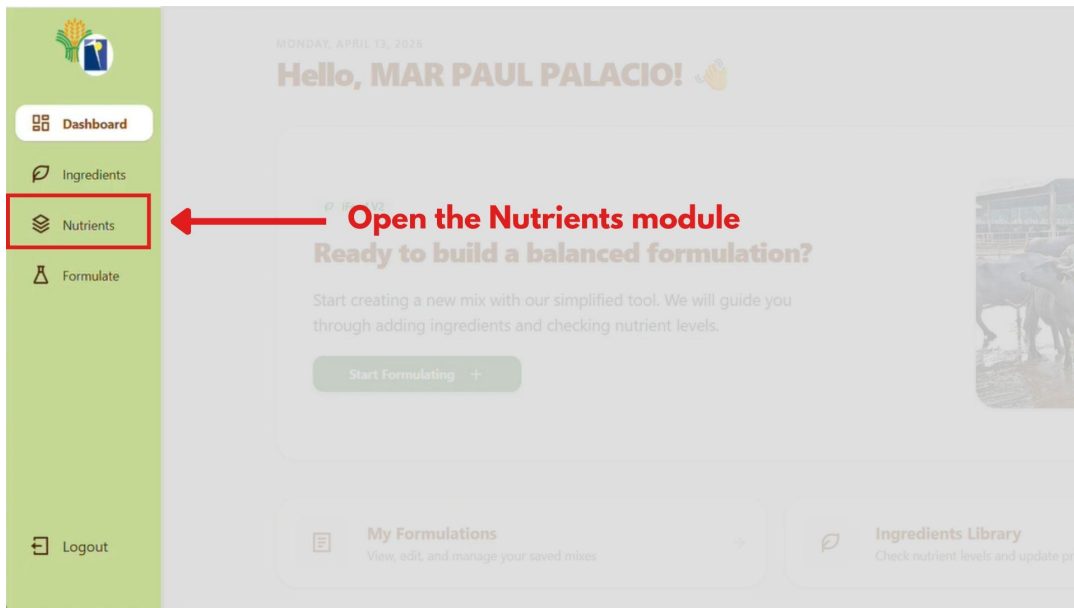

Shows the ingredients provided by the application.

Open the Ingredients module

Step 2. Navigate through Nutrients Library

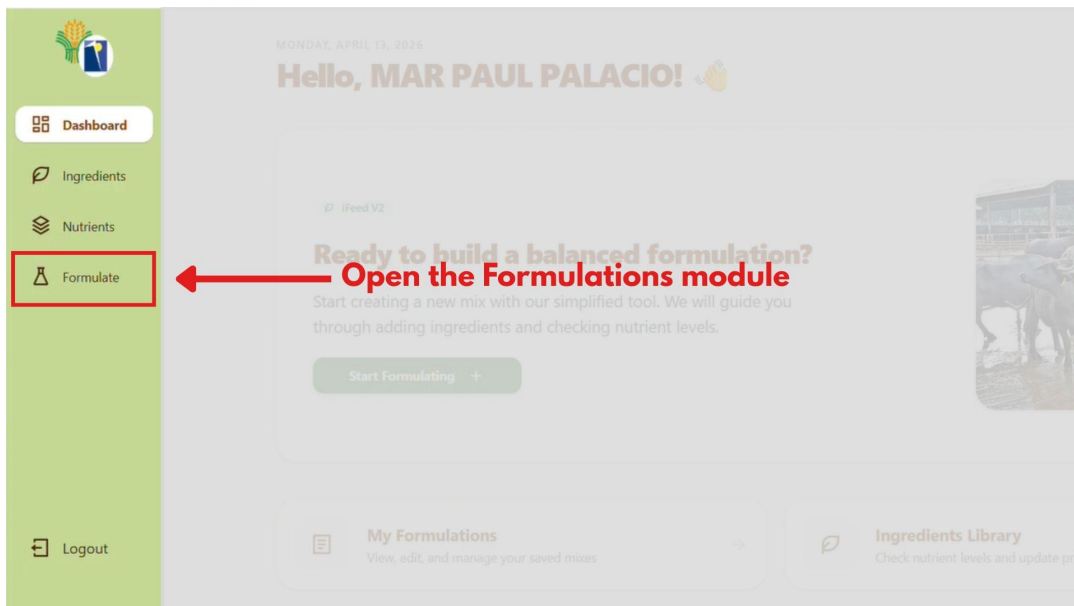

Shows the nutritional information provided by the application.

Open the Nutrients module

Step 3. Navigate through Feed Formulation

Displays the list of active formulations either created by the user or shared with the user.

Open the Formulations module

Test Cases

Test Case	Expected Result
Open Start Formulating	Formulation options are displayed
Open My Formulations	User's formulations are displayed
Open Ingredients Library	Ingredient list is displayed

Test Case	Expected Result
Open a formulation from My Formulations	Formulation details load successfully
